

MWE LADDER INDUSTRIAL STYLE

THE INDUSTRIAL LADDER

MWE now offers an interesting addition to the interior ladder production line with the new industrial style ladder.

While continuing to strive for engineering perfection, the industrial ladder allows the same extensive customization so the design never has to sacrifice style for functionality.

A sophisticated library ladder - stylish yet functional

The new industrial-style library ladder boasts a certain raw charm. The design of the new ladder system takes its cue from the steel hardware SB.0001, which maintains the same product quality of MWE reflected in the details.

In order to ensure that the roller is quiet and stable, the guide rails on the new ladder – as with all other MWE ladder systems – are made of solid stainless steel. The height of the ladder and the length of the guide rails may be ordered to specific lengths. Each and every ladder is individually planned and sketched by the MWE technical department. Once the technical drawings have been approved, it is then made by the in-house ladder department.

The lower roller, with patented brake technology, ensures that the ladder doesn't move an inch when in use, giving the user peace of mind. Depending on customer requirements, the rungs can be made from a different wood or even fitted with matching perforated metal.

Overview:

- + Extra wide steps
- + Stability for heavy weight
- + Easy to move
- + Extra big roller head
- + Safe stand
- + Roller foot

Technical details:

You will find further information all the technical details for this product www.mwe-tuersysteme.de
